COURSE DESCRIPTION

This is the 33rd offering of our highly acclaimed annual, postgraduate course that emphasizes clinical MRI and CT of the entire body, including neuroradiology. It is designed for practitioners using MRI and multi-detector CT, and those who wish to learn the latest applications from experts. The basic format of the course is didactic lecture style. The first two and a half days of the course (Monday, Tuesday, and Wednesday morning) cover Body, including, chest, abdomen, pelvis, cardiovascular, breast and musculoskeletal imaging; second two days (Wednesday afternoon, Thursday and Friday morning) cover Neuro Imaging. The Neuro Imaging curriculum spans the complete spectrum from spine, to brain, to head and neck/ENT. The Neuro Imaging curriculum is directed toward the practicing radiologist, with emphasis on the translation of advanced techniques and technologies to the clinical domain. Each morning session (Wednesday-Friday) will begin with a case conference during the continental breakfast. One can register for the entire five-day course (including the Body and Neuro sections) or only for the Body or Neuro Imaging components.

OBJECTIVES

At the conclusion of this course, participants will be provided with

- Up-to-date information on the latest MRI and CT techniques for both body and neuroradiologic applications, many of which will be directly applicable in the clinic.
- Sufficient background to manage an MRI or CT facility and gain insight into the way experienced radiologists perform and interpret these examinations.
- Focus-sessions on Spine and ENT imaging will cover major clinical gamuts in these disciplines.
