Virtual Colonoscopy
Two-Day Minicourse

Virtual Colonoscopy is a new developing technique providing an alternative method of screening for colorectal cancer and precursor lesions (polyps). Since this is a new technology, few radiologists, technologists or gastroenterologists have experience in the understanding, performance, or interpretation of these studies. This two-day minicourse is intended to provide a means to educate radiologists, gastroenterologists, and technologists in the current state of the art in virtual colonography (CT colonography).

This two-day structured minicourse includes:
• Didactic lectures
• Demonstrations and tutorials on Viatronix workstations
• Review of cases form our pathology-proven database

COURSE OBJECTIVES
At the conclusion of this fellowship, participants will be able to:
• Describe the current state of the art of virtual colonoscopy
• Discuss the issues related to colorectal cancer screening and the impact of this new modality
• Acquire skills necessary to perform and interpret virtual colonoscopy
• Identify the advantages and disadvantages of the current available workstations, virtual colonoscopy software and preparation kits
